

## Summer Off Season Care

Once your Season is complete the best thing for your skis is to clean them. This can be done by brushing them out and wiping them down with SWIX Fluro Glide Cleaner. Followed up by covering them with a layer of Soft wax such as SWIX BP99, CH10 , TOKO NF Yellow or TOKO NF Hot Box & Cleaning wax. We also provide a Summer Service were we apply cover wax & when you return in the fall, we will scrape, brush & coat with a skiable wax for the start of your season for

\$24.99

# Care For Your Skis

Skis do require maintenance no matter if they are waxed or waxless skis. All of the skis we sell at Out There have a wax service done prior to leaving the shop. On the glide zone of all they have 3 layers of SWIX BP99 reheated followed by two layers of SWIX BP77, scraped, brushed and ready to ski. All waxed classic skis will also have a kick binder or tape applied to the designated kick zone. Waxless skis will have the tips and tails glide waxed. For long term performance of your Waxless skis we recommend that either periodic hot waxing of the tip and tail area or the use of a product like TOKO Grip and glide which can be applied to the full length of your waxless ski.

## Why do Maintenance?

The base material on modern skis is intended to have wax applied to it to increase it's performance as well as protect and keep the material from oxidizing. Continual application of wax will increase the durability, performance and life of the base. This can be done at a **minimum** thru a HOT WAX service for your skis at the start of each Nordic season and applying storage wax to the skis in the off-season. To increase the quality of the base more frequent waxing can be done throughout the ski season.

## Service Options

- **Essential Waxing:** \$39.99 The basics in glide for both waxed and waxless skis to help protect the base and give basic glide
- **Improved Waxing:** \$49.99 Good training wax system. Will be more temperature specific and give better longer lasting glide
- **Preferred Waxing:** \$79.99 Race day is here and you are looking for very good skis. Wax of the day type situation

- **Superior Waxing:** \$99.99 Vasaloppet here we come. You need wax to be durable, fast and to last at least as long at the Great 90km Vasa in Sweden! Spare nothing.
- **Thermo Treatment:** \$49.99 Base saturation is a key to a ski's performance Thermo treatments use waxes made specifically for this purpose. After a Stone Grind or on New Skis this is a great way to build up (Approx 15 layers) the wax in a ski base
- **Thermo 50 Treatment:** \$79.99 This Thermo Treatment is similar to the other, but Better! (Approx 50 layers of wax) The Ultimate in base saturation!

## Stone Grinding

We also offer Stone grinding service for damaged , burnt and bases that seem to not accept wax. This process involves removing a small layer of the base material and giving you a NEW Fresh surface ready to absorb wax
